I have a number of Paul Humann Reef Fish identification books. They are very detailed and provide help on fish identification. Although there is extensive information, don't expect every fish to be represented. Also, many fish are very similar or differ from juvenile to adult. You also need to pay attention to the range for the fish in the pictures. You may think you have just found a rare fish when in fact, it does not inhabit the area where you are. All the details of how to use the book are in there so take time to see how to best use this excellent reference. I recently used this book for my dives on the Great Barrier reef and Coral Sea.

This book made a wonderful gift for my father in law. He is a Diving Junkie and this book included hundreds of colorful pictures and details about the marine life.

Great photos showing several phases so you can be more accurate in your identification. Great to have along on our recent trip to French Polynesia.

Beautiful book, the best I know if you plan on diving or snorkeling the Pacific. Aboard our ship in Raja Ampat they had this guide as well.

I already had bought the first edition and bought this second edition to update myself. It is a LOT of information. I recommend it 100%

This was a birthday gift to my sister who scuba dives all over the world -- she requested this book and LOVED IT!
