Customer Reviews

I absolutely love fish and it seems like it's the healthiest meat you can eat. Lately I've been thinking a lot about retirement and what I'd like to do once I'm no longer active in the work environment. I don't want to sit on my couch all day watching television. With no fresh fish markets in the area, I've been considering the possibility of going into business for myself and fulfilling a dream I've always had. To me, the idea of a man-made fishpond makes sense on both a hobbyist and economic level. With that idea blossoming in my mind, I figured why not try and create some type of fishpond. At the very least it would be something fun to do if nothing more. I researched the topic extensively, reading online articles and books on the subject. Eventually I came to this one. This book right here, *Introduction to Aquaculture for Small Farmers* • this one is one of the best books you can get on the subject in my opinion. The reason why is simple, the writing is clear, to the point, and it includes a hefty amount of information that has taken me months to collect by reading other texts. If I'd started with this one, it would have saved me a great deal of time. The steps and strategies in this book are straightforward and easy to implement if you have the right amount of time and money. First, you need to know what kind of aquaculture system you're going to be able to produce. In my case, I have to do home recirculating, which is essentially buying an above ground pool and setting it up in my backyard. Once you understand what type of system you want, you'll need to know about facing the challenges of fish farming in order to determine if this is something you even want to tackle.
